

Remove stale air, food odors,  
and that stuffy feeling without  
running the air conditioner.

# HIGH-VOLUME POWER ROOF VENTS

It is a little warm inside the motorhome, but not hot enough to run the air conditioner. The coach is a bit stuffy, but even with the windows open, there is barely a breeze. A faint aroma lingers from the fried onions we had with the burgers for lunch. Wow, here's a great idea — let's turn on that high-volume vent fan the sales guy told us about when we bought the coach!

Sure enough, within seconds the fan blades are turning and fresh air begins to flow throughout the motorhome, evacuating several hundred cubic feet of air each minute. What a marvelous piece of equipment! It is quiet, energy-efficient — using only a little 12-volt current — and very effective. Sometimes the ceiling vent fan is the perfect solution.

Well, all of that might sound like a sales pitch. So be it! Personally, I am a believer. Our coach came equipped with two vent fans, but if it hadn't, we would surely have had at least one installed. We use them a lot. If you are considering the addition or replacement of a vent fan, survey the features of these models currently on the market.

*continued »*

**A FEW WORDS OF CAUTION:** When operating the vent fan, in most applications it will be drawing air in from the outside, either in the forward or reverse mode. If any generators (engines) are running in the immediate area, this air may be contaminated with deadly exhaust fumes – carbon monoxide. Be aware of your surroundings and test your CO detector frequently.
